

Treatment of Breast Cancer with Hormonal Therapies

Wednesday, August 23, 2017 7:00 pm

Hormonal therapies have become the standard of care for breast cancer that is estrogen receptor positive. How do hormonal therapies work and who should consider these? What are the differences between Tamoxifen and Aromatase Inhibitors? Which treatments are best for pre or post-menopausal women? How does hormonal therapy differ in the treatment of early disease versus metastatic breast cancer?

Do these therapies

affect bone health?

Are there long-term side effects to these drugs?
