Heart Matters:

Long Term Effects of Breast Cancer Treatments on the Cardiac System

Eugene Storozynsky,
MD, UPMC

FREE!

**No reservations
required. Join us!**

Wednesday, February 28, 2018
7:00 pm

A breast cancer diagnosis can lead to treatment including chemotherapy and radiation. Early in a diagnosis, patients often focus on the short term side effects of nausea, hair loss and skin irritation. However, it is important to be aware that these necessary treatments come with potential long term side effects on our heart.

Please join us as we explore the long term effects of breast cancer treatments on the cardiac system and how doctors can identify, mitigate, and treat these effects.

Come with questions... Leave with answers!

Seminar Location: Breast Cancer Coalition
1048 University Avenue, Rochester, NY • 585-473-8177 • www.bccr.org
